Banca Farnese

To achieve a striking appearance after sundown, Banca Farnese has opted for coloured LED illumination using Focalflood façade floodlights.

The modern addition to the Banca Farnese building contrasts with the intricate structure of its historical architecture. At night, Kubus façade luminaires accentuate the axes of the old part, a villa. At the new part, Focalflood façade luminaires accentuate the window reveal of the double façade. A DALI Light System is used to comfortably programme lighting sequences.
