Pinsent Masons law firm, Belfast

Report

The reception area was to be the designed as the firm's showpiece,

indicating its expertise and communicating integrity and reliability. "The lighting concept, in our view, is ideal to create a striking appearance that enhances the business culture for both the team and the visitors," Pinsent Masons explains. To this end, the designers opted for a warm white light colour in order to produce a welcoming ambiance. Quintessence wallwashers set off the delicate grain of the wood-panelled wall. Cylinder surface-mounted downlights break up the expanse of the ceiling. In their minimalist design, the effective lighting tools unobtrusively recede into the background. The reception connects to a waiting area with columns which are illuminated from below using Nadir recessed floor luminaires, thereby producing a more dynamic, three-dimensional look of the room.

## High-quality office equipment for concentrated working

The workstations are illuminated using neutral white light, which has proved more pleasant and easier on the eyes when working at computers. "The zonal lighting for workstations, shelving and conference tables creates a more diversified and attractive working environment," Pinsent Masons confirms. For concentrated work in the relevant areas, Quadra recessed luminaires provide glare-free ambient lighting. Compact downlights produce attractive lighting accents on individual elements in the room, such as columns or book shelves, thereby underlining the character of the architecture. The conference and meeting rooms are separated from the office section by glass walls. The primary concern here was to prevent reflection on these glass surfaces. Quintessence recessed luminaires with oval characteristic can be adjusted precisely to illuminate specifically the circulation area in front of the rooms and therefore offered the ideal solution.
