

Wiesbadener Volksbank – Private Banking

Lighting designer: Arne Fiedler, Wiesbaden
Photographer: Dirk Vogel, Dortmund
Project location: Wiesbaden

The Private Banking department of the Wiesbadener Volksbank has found its home in a historic villa - which is scenically illuminated in prestigious fashion at night using ERCO's LED technology.

Such buildings with historical facades that are richly partitioned really lend themselves to lighting concepts that emphasise this partitioning and bring out individual features. The result is a prestigious night-time appearance that does justice to the use of the building.

A particularly efficient lighting tool for this design approach is the Kubus LED facade luminaire, which with its grazing beam of light adds attractive accents - it is also maintenance-free and has minimum energy consumption.

In addition to the scenically illuminated facade, the lighting concept also includes the steps and front garden of the re-appropriated villa. Here, the lighting designers used both Panorama bollard luminaires and Midipoll

bollard luminaires with LEDs, which, in a particularly energy-efficient manner, also delineate the space.
